

Igusa is a gentle, natural material—safe for anyone to use and touch.

There is no legal requirement for igusa to undergo pesticide residue testing. However, because tatami is something our customers touch directly, lie down on, and live with every day, Gozakura Juhey voluntarily has its igusa tested for pesticide residues by an independent research institution. No pesticide residues have been detected.

Safety and peace of mind come first. We use agricultural chemicals with great care, always keeping in mind that our tatami should be gentle and safe for our customers.

For detailed test results, please [click here](#).

※ Our igusa is not grown without pesticides. We use agricultural chemicals only when necessary and with careful attention to their proper use.
